

FEED

Description: Feed is an online meal service platform connecting hungry people to home cooks or restaurants who can prepare their orders and requests. Feed allows access to those home cooked meals we all enjoyed growing up as well as the convenience of having extremely accessible restaurant quality preparation. The food is prepared by cuisine enthusiasts who range from amateur chefs, to stay at home parents, to even a child passionate about cooking. Furthermore, Feed has a special feature where you can not only order from restaurants, you can request an off menu item from restaurants. Feeders can arrange various ways of getting people their food, whether it be taking orders a day prior and meeting at a designated spot, or regular pick up and delivery.

Feature Allocation:

User:

- Profile contains information about the user including: favourite food and type of food, favourite places or people ordered from, as well as sharing any recipes they like
- Profile is created on sign-up where the user chooses to display what they want from the information collected on the sign-up page about location, name, phone-number, email, location, DoB
- User must authenticate with a username and password created on sign-up. Facebook or twitter validation is also accepted
- User has the availability of an order page, where they can select what they want and even write a review

Feeder:

- A feeder is a special type of user, who are the trusted preparers of food
- A feeder has all the features as a regular user, except they also have an order page that contains their menu, type of food, most ordered dish, best reviewed dish, rating, recipes (if they choose to share them), location, contact info, what kind of delivery method, if they deliver, do they use
- A Feeder can also be a restaurant

Social Network/Rating/Search and recommendation:

- Users rate Feeders based on quality of food, price, overall experience
- Users can provide feedback to a Feeder
- Users can look up Feeders based on their type of food, specific dish, rating, location, delivery method, if they take requests, and recommendations
- Users can recommend places based on their experiences, as well as write a written review

Admin:

- Admin can have a user profile, but more importantly they have access to the back end, where they can edit user profiles including deleting as well as access to the database

Team and Task assignment:

Rowan Comish(c3comish): Idea.pdf, Admin API

Abbass-Ali Siwjee(g3siwjee): Profile, Update Profile page, Recipe page, Rating and reviews for recipes

Mohamed Metwaly(c6metwal): Login, Sign up, General artwork and theme, visual quality control

Jeffrey Deng(g4deng): Create a Review Page, My Order Page, Search Page with suggestions
